

Vulvodynia and Pelvic Pain: An Evidence-Based and Practical Guide to Treating Women in Pain

Course Description

This program is designed to update clinicians regarding recent research and clinical outcomes in the areas of detailed diagnosis and management of vulvar disorders that cause pelvic pain and dyspareunia. Topics will include anatomy, embryology of the vulvovaginal tissue, hormones, differential diagnosis and treatment plans.

Target Audience: Potential attendees of the courses include (but are not limited to) physicians, residents, medical students, nurse practitioners, physician's assistants, nurses, psychotherapists, physical therapists and sex therapists.
